

Realestate Management Suite

Realestate Management Suite is complete solution for agencies to manage and organize their property database. As an agency itself, we spent years to perfect this software.

Realestate Management Suite has a powerful web publishing system that generates the real estate listings for your website. Your customers will find it easy to locate a property on your website. You will find it easy to maintain. It handles everything, from image processing to search scripts and synchronized uploading. The data and images in the database are used to generate:

- A directory of categorized listings.
- A property search engine.
- Property details pages.

Realestate Management Suite in-built editors allow you to customize the look, content and categorization of your web listings.
